## State Level workshop.....

Nursing is the health care career of 21st century. Nursing is a discipline that offers both a lifetime of satisfaction in service to others and rewards so great that they cannot be measured. Nursing is listed everywhere as one of the top growth professions. Nursing at Apollo is the one of the career path that has taken us in so many directions. This means that as we grow and develop as a nurse in Apollo you can continually reinvent, grow and develop as a professional nurse. When you are a nurse you will know that at the end of each day you have done work that is substantial and meaningful. You have opportunities to work with people of all ages in environments that range from caring for a patient who is critically ill to being an editor of a nursing journal. Nursing practice has various avenues and prepares competent nurses who must not only survive but also thrive in an ever changing and always multifaceted system.

Research in Nursing is key element in the nursing profession that has implications in changing education, practice, health policies and health status of the Country. Research is also an important tool for the continual development of a relevant body of knowledge in nursing. Most reviews of research take the form of traditional literature reviews, which usually examine the results of only a small part of the research evidence, and

Systematic Reviews finds out more on why it is important to be systematic. Such reviews then go on to synthesize research findings in a form which is easily accessible to those who have to make policy or practice decisions. In this way, systematic reviews reduce the bias which can occur in other approaches to reviewing research evidence. Well conducted Systematic Reviews provide the best evidence to guide clinical practice, are cornerstone for the recommendations of Evidence-based practice guidelines, and should be an integral part of the planning future research.

Apollo College of Nursing being a reputed and pioneer Institution in Nursing is excited to be launching a new workshop focused on Systematic Reviews, which is ideal for faculty, graduate students, and research assistants. This one day, hands-on workshop will help & guide you through the start-up process, provide an introduction to locating relevant studies and recording the methodology. There are topics like stages of the systematic review process; framing the search question with tools like PICO; searching databases and grey literature sources; and tips for using citation management software for systematic reviews.
